

# ***Vocabulary***

## **Testing and Improving HTML**

These terms and phrases will be used throughout the lesson. You can come here to review your understanding of these words as you work through your practice activities and projects.

**Accessibility or a11y:** Accessibility is the practice of making your websites usable by as many people as possible. This includes people with disabilities, specially, visual disabilities like color blindness, or motor impairments.

**Compatibility Testing:** When developers test their code against different platforms. In web development, this is done by opening the website in different internet browsers

**File Size:** The size of the file in bytes. For example, an image file can be 16 kilobytes in size.

**Launch:** When a website is published to the world wide web and ready to be used by all users

**Release:** When software or website is published and used by the final intended audience.

**SEO: Search Engine Optimization.** A set of techniques and practices that help search engines index sites content and links.

**Validation or Validation service:** A quality assurance program that checks code for syntax errors and produces a list of recommendations.
